

# Product category parent assign, category tree regenerate

Add or remove products from default category parents, regenerate the category tree for products and categories

## Install steps:

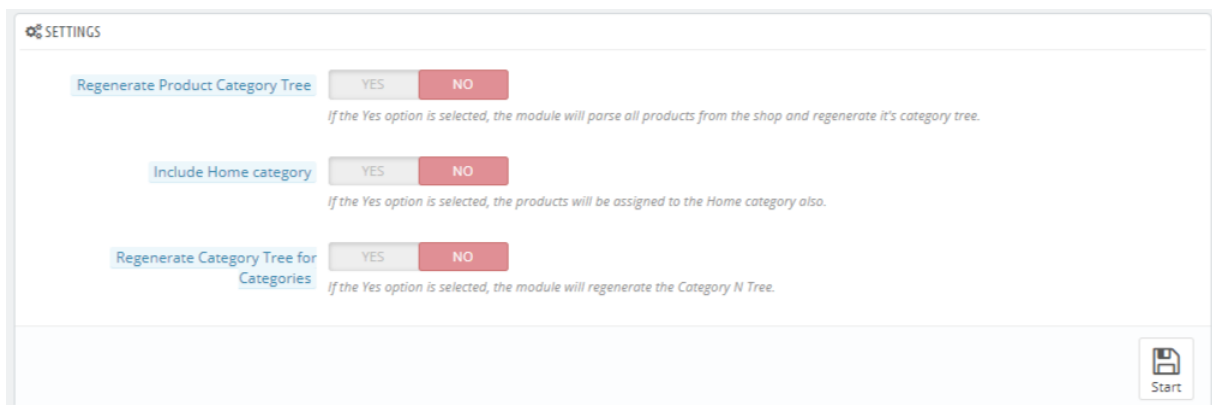

- Download the module from your account
- Go to your shop's dashboard
- Go to Modules
- Click Add Module and select the archive you've downloaded from your computer
- Install the module

- Go to module's configuration page

## Configure the module

**Regenerate Product Category Tree** – Set this option to Yes only if you have products that have a default category but those products are not assigned to the parent categories of the default category;

**Regenerate Category Tree for Categories – Set this option to Yes if there are issues with the Category Tree.**

**Rassign to default category only – Set this option to Yes if you want all products to be assigned only in their default category. Enabling this option it will remove all the product-category associations, but will keep only their default category.**

 REVERT PRODUCT CATEGORY ASSIGN

Assign to default category only

YES

NO

*Set this option to Yes if you want all products to be assigned only into their Default Category. This will remove them from the parent categories.*
